Description

The A200 Series of high-performance, digital cameras is ideal for a variety of industrial applications. The cameras can be triggered via an external sync signal or run in an internally controlled „free-run“ mode. A200 cameras operate with a single voltage power supply and have the advantages of the remarkably simple cabling requirements outlined in the Camera Link standard. A combination of features such as digital shift, test images, and indicator LEDs, ensure that these versatile cameras provide an exceptional price/performance ratio. To have a better adaption to the appropriate application, the A202k is available with two gain setting variants.

The A200 series cameras are ideal for applications like: Semiconductor and component inspection, manufacturing quality control, traffic control, food and beverage inspection, microscopy and medical imaging and many other vision applications.

Basler Camera Test Tool

To ensure consistently high product quality, we employ several quality inspection procedures during manufacturing. Basler customers get a 100% tested camera, all of the benefits that go along with 100% testing, and a much higher level of satisfaction. This is a definite win-win situation.

Your benefits include:

- Superior image quality improves your image processing results
- Super compact size reduces the space needed in your installation
- 100% factory testing ensures consistent product quality
- LED indicators and test image generation capability reduce your integration time and aid troubleshooting
- Area of Interest (AOI) scanning allows higher frame rates
- Windows® setup tool lets you configure your camera with ease
- Electronic exposure time control provides maximum flexibility
